

Coco Peat

Coir Pith

 www.cnvexports.com

Coir pith is the waste material left after the coconut husk has been removed. The husk is then used to make coir, a natural fibre that is used in a wide range of applications including ropes, mats, and geotextiles. Coir pith is a by-product of this process and is often used as a soil conditioner. It is a natural, biodegradable material that can improve soil structure and water retention. Coir pith is also used in horticulture and landscaping for erosion control and as a mulch. It is a sustainable and eco-friendly product that can help reduce the environmental impact of coconut processing.

Coir pith is a natural and sustainable material that can be used in a variety of applications. It is a by-product of the coconut husk processing industry and is often used as a soil conditioner.
